

Students must meet the following clinical partner agency requirements to be eligible for placement in a clinical rotation. The clinical requirement placement process begins after acceptance into the Nursing Program.

ACEMAPP

Information on how to create your account will be emailed to you by the Nursing Department. The cost will be approximately \$85. Students will use ACEMAPP for their immunization tracking for the duration of the Nursing Program. Students will need to upload all their clinical documentation to the website and keep their clinical placement requirements current throughout the program. (Here is a helpful link to the ACEMAPP Student User Guide w/ Videos: <https://collaboration.acemapp.org/kb/474?q=student+user+guide>)

Criminal History Background Inquiry & Urine Drug Screening through Complio/American DataBank (Bellinghamtechcompliance.com)

Students will be required to create an account with [Bellinghamtechcompliance.com](https://www.bellinghamtechcompliance.com). Information on how to create your account will be emailed to you by the Nursing Department. The cost will be approximately \$90. Students must pass a criminal history background check and provide a negative 10-panel urine drug test. Information on the background check process and disqualifying crimes can be found on the Criminal History Background Check Info Sheet. Students with pending and/or disqualifying crimes are not eligible for clinical rotations. Dilute UA samples require rescreening within five business days at an additional cost and a second dilute sample is considered a positive. If your final drug test results are positive, you will be ineligible to participate in the program for one year. *Instructions for initiating the process and creating an account will be sent to you from the Nursing Department after acceptance into the program.*

CPR Certification

Students are required to be **American Heart Association (AHA) BLS Provider** (Healthcare Provider) CPR certified. Courses sponsored by the American Red Cross or any other agency are not acceptable. Several sections of AHA 911 or AHA 912 Healthcare Provider CPR are offered at BTC. Go to the www.btc.edu/TakeClasses to find course offerings. The course must include an in-person hands-on skills check. Online courses that do not include in-person hands-on skills are not acceptable.

Health Insurance

You must submit proof of current health insurance coverage. Student Injury-only insurance is acceptable and information on how to enroll is available on the [BTC website](#). Your health insurance must be current throughout the duration of the program, and you must notify the nursing program of changes to your health insurance.

Tuberculous Screening (TB test)

Note: COVID-19 vaccines can cause a false positive on a TB screening. You must wait four weeks after receiving a COVID-19 vaccination to complete TB screening.

One of the following methods of TB screening is required to show proof of negative TB status:

- **2-Step Skin Test (TST):** A two-step is an initial injection that is then read by your nurse or doctor within 48-72 hours. The test must be repeated (second step) no earlier than one week from the 1st reading. A typical schedule is as follows:
 1. Initial appointment – first test (injection) is placed
 2. Second appointment – 48-72 hours after receiving the first test, it is read (measured)
Wait – 1 to 3 weeks after reading of the first TB test
 3. Third appointment– second test (injection) is placed
 4. Fourth appointment – 48-72 hours after receiving the second test, it is read (measured)*If you have had a two-step TB (TST) screening in the past, you only need to have a one-step screening done each year. If more than a year has passed since your last TST, you must start over with the two-step process.*
- **IGRA Quantiferon or TSpot:** is a blood test that is ordered by your healthcare provider, you go to a lab to have your blood drawn and then you receive the results.
- **Chest x-ray and annual symptom review:** This is usually done only for people who have tested positive for TB from either the TB skin test or blood test. Students who were born outside the United States may have received a vaccination that now shows up as a positive result on the skin test. Proof of a negative chest x-ray is required, but

students do not need to get an x-ray every year. To maintain current with this type of screening students need to have their healthcare provider complete an annual symptom review.

Immunizations

Nursing students must have proof of all the required immunizations on file with the Nursing Program before they can attend clinical. If you need to update your immunizations, you may submit partial proof initially and then complete the process after the quarter starts **but before** beginning clinical rotations.

- **MMR (Measles-Mumps-Rubella):** proof of 2 MMR vaccinations in your lifetime or positive titer indicating immunity to Measles, Mumps and Rubella is acceptable.
- **Tdap:** you must have proof of having received one Tdap (tetanus, diphtheria, acellular pertussis) booster immunization *since 2006*. Students are encouraged to be up to date on their tetanus vaccination as well but it is not required.
- **Varicella:** proof of 2 varicella vaccinations in your lifetime or positive titer indicating immunity to varicella. The vaccination or titer may be waived (*for varicella only*) if your healthcare provider signs off stating the date (m/d/y) that you had the disease (chicken pox).
- **Hepatitis B (Hep B):** proof of a positive titer indicating immunity to Hepatitis B or proof of at least the first Hep B vaccination in the sequence. It is the student's responsibility to complete the sequence (3 injections and a positive titer indicating immunity) and submit proof to the Nursing Program. Students are required to complete the Hep B series while they are in the program before attending clinical rotations at a PeaceHealth facility.
- **Influenza:** you will be required to obtain an influenza vaccine during each yearly flu season. Proof of vaccination must include current season, the date of vaccination, and practitioner/location where your vaccination was administered. Only medical exemptions are accepted in place of yearly influenza vaccination. Contact clinicalinfo@btc.edu for information about the medical exemption.
- **COVID-19:** you will be required to obtain a COVID-19 vaccine during each yearly respiratory illness season. Proof of vaccination must include current season, the date of vaccination, and practitioner/location where you vaccination was administered. Personal exemptions are accepted in place of yearly COVID-19 vaccination. Contact clinicalinfo@btc.edu for information about the personal exemption.

Summary of Next Steps- Once you have been offered a seat in a Nursing cohort

1. The clinical placement process begins after you have been accepted into a Nursing Program cohort and before your first clinical quarter.
2. You may begin by gathering your immunization records. If you are unsure of your current vaccinations the WA DOH offers online access to the vaccine registry at <https://wa.myir.net/>. You will need to register and create an account.
3. You will receive an email from the Nursing Department with deadlines for completing clinical requirements, instructions for creating an account and submitting documentation.
4. You must pass the urine drug screen (UA) and background check before you are released to register for Nursing Program classes. Creating your Complio account and paying for the services initiates the background check process.
 - You are responsible for scheduling your UA appointment at the designated collection site. Negative results will be available within 3 business days from collection. If the test is non-negative it will be transmitted to a Medical Review Officer (MRO) for review. The MRO will contact you by phone with the next steps. If your sample is dilute you will need to retest at additional cost. *BTC staff cannot be involved in the drug testing process in any way.*
5. Complete AHA BLS Provider CPR class only if you have not completed it beforehand.
6. Start the 2-step TB skin test process as it can take three or more weeks to complete. Please see note above about COVID-19 vaccination and TB screening.
7. Upload your immunization clinical requirements documentation to ACEMAPP.

For questions about the clinical placement requirement process or [Bellinghamtechcompliance.com](https://www.bellinghamtech.compliance.com) (Complio/American DataBank), or ACEMAPP please contact clinicalinfo@btc.edu.
